

Electricity is essential for commerce.
Learn how to ensure that your business stays
open when the power goes out.

You can't do business if your doors are closed. The U.S. power grid is facing more threats now than ever. Severe weather, aging equipment and now cyberattacks are real threats to the electrical stability we all need. With a Standby Generator you won't be "powerless" against blackouts, brownouts and regional outages.

PowerPro Service Company will conduct a one hour Lunch & Learn on the ways electrical resiliency can be built into your present business. Join us on **TUESDAY, OCT. 30th**, for a look at how Standby Generators can keep your lights on and your doors open. Seats are limited and the food will be delicious. Give us a call at our office or contact Jen Fricke at L.I.B.I. directly, to RSVP and reserve your spot.
