

Virus Cleanup: COVID-19

ROUTINE CLEANING TO LIMIT VIRAL SPREAD

The NYS Department of Health recommends frequent cleaning of high-touch surfaces to reduce the risk of viral spread. Clean the following surfaces in your facility and home multiple times per day. Soap and water works great and household disinfectants are recommended. If you are unable to perform this on your own, Maxons has the resources and expertise to help you.

CONFIRMED CASE REQUIRES BIOHAZARD TEAM

As of now, specially trained and licensed biohazard techs must be the ones who disinfect a contaminated space. Regular workers and occupants risk infection if a facility is not properly treated. If you have a confirmed case affecting your property, Maxons has specialized crews, equipment and knowledge to perform the necessary decontamination process.

CHANGING SITUATIONS

Health authorities are updating procedures almost daily. Please refer to the following links for more information:
